

Security Management System (SMS) Release Notes

Version 6.5.0.1

This release includes all issues fixed in the *Security Management System Release Notes Version 6.5.0*. For details about those changes, refer to the respective Release Notes on the [Online Help Center](#).

Important notes for SMS

- If you are using SMS 6.5.0 and none of your managed devices use the 3.2.0 Digital Vaccine (DV) version, you must upgrade to SMS 6.5.0.1 by manually downloading the package from the TMC website and importing it to the SMS.
- All v6.5.0 customers can optionally apply this patch so that the issues it addresses are corrected. However, upgrades to a later TOS do not require an installation of this patch first.
- Patch installation should take approximately 15 minutes.
- To prevent your account from being disabled while you wait for authentication resources to become available after the reboot, navigate to **Edit > Preferences** and make sure that you deselect **Lock user after failed login attempts** and **Auto reconnect client to server after a disconnect occurs**. The SMS automatically reboots after you install this release. You will then be prompted to update the SMS client.
- This patch can be uninstalled or rolled back to the previous version.

Release contents

The following enhancements or repairs are included in this release.

Description	Reference
An issue where you could not automatically upgrade the SMS from version 6.5.0 in certain circumstances has been fixed.	TIP-138813
An SMS API issue was fixed. This fix allows the SMS to reconnect to Vision One to handle incoming API calls after being disconnected for over an hour.	TIP-138450 PCT-61994 PCT-52228 PCT-63172
This fix addresses a specific issue where device port indexes were left uninitialized, causing reports to incorrectly show that the device was not receiving traffic.	TIP-138326 PCT-66914
