

## Security Management System (SMS) Release Notes

Version 6.5.1.1

This release includes all issues fixed in the *Security Management System Release Notes Version 6.5.1*. For details about those changes, refer to the respective Release Notes on the [Online Help Center](#).

### Important notes for SMS

- All v6.5.1 customers can optionally apply this patch so that the issues it addresses are corrected. However, upgrades to a later TOS do not require an installation of this patch first.
- Patch installation should take approximately 15 minutes.
- To prevent your account from being disabled while you wait for authentication resources to become available after the reboot, navigate to **Edit > Preferences** and make sure that you deselect **Lock user after failed login attempts** and **Auto reconnect client to server after a disconnect occurs**. The SMS automatically reboots after you install this release. You will then be prompted to update the SMS client.
- This patch can be uninstalled or rolled back to the previous version.

### Release contents

The following enhancements or repairs are included in this release.

Description	Reference
This release enhances the reliability of the SMS high-availability communication channel.	PCT-64850
An issue where SMS event logs were not visible has been fixed by making metadata improvements.	PCT-58316 PCT-58983
An audit log file was behaving abnormally. This issue is now fixed.	PCT-64730
An issue with SMS database cleanup has been fixed. Database cleanup now works for historical tables when the SMS is configured for HA.	PCT-66915
An issue with SMS data upload speeds was fixed. This issue caused a long delay for events to display in Trend Vision One. After this patch is installed, there could be a delay before seeing current events while the SMS catches up.	PCT-70269
