Trend Micro™ TippingPoint™ Security Management System Release Notes

Version 6.1.0.1

This release includes all issues fixed in the *Security Management System Release Notes Version 6.1.0*. For details about those changes, refer to the respective Release Notes on the [Online Help Center](#).

Important notes for SMS

- All v6.1.0 customers can optionally apply this patch so that the issues it addresses are corrected. However, upgrades to a later TOS do not require an installation of this patch first.

- Patch installation should take approximately 15 minutes.

- To prevent your account from being disabled while you wait for authentication resources to become available after the reboot, navigate to **Edit > Preferences** and make sure that you deselect **Lock user after failed login attempts** and **Auto reconnect client to server after a disconnect occurs**. The SMS automatically reboots after you install this release. You will then be prompted to update the SMS client.

- This patch can be uninstalled or rolled back to the previous version.

Release contents

The following enhancements or repairs are included in this release.

Description	Reference
Discrepancies between the disk space allotted for upgrades and the actual size of the upgrade package have been resolved.	TIP-108287 TIP-108254
The 1:00 a.m. GMT device discovery time has been disabled, which both extends the availability and improves the performance of the SMS.	PCT-10395 TIP-107400
The SMS now correctly reports the current system log events to the security operations center (SOC).	PCT-2028 SEG-182979 TIP-103418
Under high CPU usage conditions, the SMS client no longer hangs when trying to access the vSMS.	SEG-165834 TIP-91217 TIP-88696
The SMS interface no longer hangs after running a saved report.	TIP-91218 SEG-169383 TIP-89250
Performance issues affecting SMS profile distributions have been repaired.	SEG-180526 TIP-92625 TIP-93845
The SMS database cleanup processes now work correctly on row-based partitioned tables.	TIP-89402 TIP-93875
Policy distributions no longer return an `Unable to save the settings. (8810000)` error.	SEG-189705
An issue affecting outbound SSL Client Proxy configurations has been fixed so that the Decrypted Service value can now be set to something besides <Other>.	TIP-106447 TIP-106043
