Privacy and Personal Data Collection Disclosure

Certain features available in Trend Micro products collect and send feedback regarding product usage and detection information to Trend Micro. Some of this data is considered personal in certain jurisdictions and under certain regulations. If you do not want Trend Micro to collect personal data, you must ensure that you disable the related features.

The following link outlines the types of data that Deep Discovery Analyzer collects and provides detailed instructions on how to disable the specific features that feedback the information.

<https://success.trendmicro.com/data-collection-disclosure>

Data collected by Trend Micro is subject to the conditions stated in the Trend Micro Privacy Notice:

Preface

Preface

Welcome to the Trend Micro™ Deep Discovery™ Analyzer *Installation and Deployment Guide*. This guide contains information about the requirements and procedures for deploying, installing and migrating Deep Discovery Analyzer.

Documentation

The documentation set for Deep Discovery Analyzer includes the following:

TABLE 1. Product Documentation

DOCUMENT	DESCRIPTION
Administrator's Guide	<p>PDF documentation provided with the product or downloadable from the Trend Micro website.</p> <p>The Administrator's Guide contains detailed instructions on how to configure and manage Deep Discovery Analyzer, and explanations on Deep Discovery Analyzer concepts and features.</p>
Installation and Deployment Guide	<p>PDF documentation provided with the product or downloadable from the Trend Micro website.</p> <p>The Installation and Deployment Guide contains information about requirements and procedures for planning deployment, installing Deep Discovery Analyzer, and using the Preconfiguration Console to set initial configurations and perform system tasks.</p>
Syslog Content Mapping Guide	<p>PDF documentation provided with the product or downloadable from the Trend Micro website.</p> <p>The Syslog Content Mapping Guide provides information about log management standards and syntaxes for implementing syslog events in Deep Discovery Analyzer.</p>
Quick Start Card	<p>The Quick Start Card provides user-friendly instructions on connecting Deep Discovery Analyzer to your network and on performing the initial configuration.</p>
Readme	<p>The Readme contains late-breaking product information that is not found in the online or printed documentation. Topics include a description of new features, known issues, and product release history.</p>

DOCUMENT	DESCRIPTION
Online Help	Web-based documentation that is accessible from the Deep Discovery Analyzer management console. The Online Help contains explanations of Deep Discovery Analyzer components and features, as well as procedures needed to configure Deep Discovery Analyzer.
Support Portal	The Support Portal is an online database of problem-solving and troubleshooting information. It provides the latest information about known product issues. To access the Support Portal, go to the following website: https://success.trendmicro.com

View and download product documentation from the Trend Micro Online Help Center:

<https://docs.trendmicro.com/en-us/home.aspx>

Audience

The Deep Discovery Analyzer documentation is written for IT administrators and security analysts. The documentation assumes that the reader has an in-depth knowledge of networking and information security, including the following topics:

- Network topologies
- Database management
- Antivirus and content security protection

The documentation does not assume the reader has any knowledge of sandbox environments or threat event correlation.

Document Conventions

The documentation uses the following conventions:

TABLE 2. Document Conventions

CONVENTION	DESCRIPTION
UPPER CASE	Acronyms, abbreviations, and names of certain commands and keys on the keyboard
Bold	Menus and menu commands, command buttons, tabs, and options
<i>Italics</i>	References to other documents
Monospace	Sample command lines, program code, web URLs, file names, and program output
Navigation > Path	The navigation path to reach a particular screen For example, File > Save means, click File and then click Save on the interface
 Note	Configuration notes
 Tip	Recommendations or suggestions
 Important	Information regarding required or default configuration settings and product limitations
 WARNING!	Critical actions and configuration options

Terminology

TERMINOLOGY	DESCRIPTION
ActiveUpdate Server	Provides updates for product components, including patterns and engines. Trend Micro regularly releases component updates through the Trend Micro ActiveUpdate server.
Active primary appliance	Clustered appliance with which all management tasks are performed. Retains all configuration settings and allocates submissions to secondary appliances for performance improvement.
Administrator	The person managing Deep Discovery Analyzer
Clustering	Multiple standalone Deep Discovery Analyzer appliances can be deployed and configured to form a cluster that provides fault tolerance, improved performance, or a combination thereof.
Custom port	A hardware port that connects Deep Discovery Analyzer to an isolated network dedicated to sandbox analysis
Dashboard	UI screen on which widgets are displayed
High availability cluster	In a high availability cluster, one appliance acts as the active primary appliance, and one acts as the passive primary appliance. The passive primary appliance automatically takes over as the new active primary appliance if the active primary appliance encounters an error and is unable to recover.
Load-balancing cluster	In a load-balancing cluster, one appliance acts as the active primary appliance, and any additional appliances act as secondary appliances. The secondary appliances process submissions allocated by the active primary appliance for performance improvement.
Management console	A web-based user interface for managing a product.
Management port	A hardware port that connects to the management network.
Passive primary appliance	Clustered appliance that is on standby until active primary appliance encounters an error and is unable to recover. Provides high availability.

TERMINOLOGY	DESCRIPTION
Role-based administration	Role-based administration streamlines how administrators configure user accounts and control access to the management console.
Sandbox image	A ready-to-use software package (operating system with applications) that require no configuration or installation. Virtual Analyzer supports only image files in the Open Virtual Appliance (OVA) format.
Sandbox instance	A single virtual machine based on a sandbox image.
Secondary appliance	Clustered appliance that processes submissions allocated by the active primary appliance for performance improvement.
Standalone appliance	Appliance that is not part of any cluster. Clustered appliances can revert to being standalone appliances by detaching the appliance from its cluster.
Threat Connect	Correlates suspicious objects detected in your environment and threat data from the Trend Micro Smart Protection Network. The resulting intelligence reports enable you to investigate potential threats and take actions pertinent to your attack profile.
Virtual Analyzer	An isolated virtual environment used to manage and analyze samples. Virtual Analyzer observes sample behavior and characteristics, and then assigns a risk level to the sample.
Widget	A customizable screen to view targeted, selected data sets.
YARA	YARA rules are malware detection patterns that are fully customizable to identify targeted attacks and security threats specific to your environment.

About Trend Micro

Trend Micro, a global leader in cybersecurity, is passionate about making the world safe for exchanging digital information today and in the future. Artfully applying our XGen™ security strategy, our innovative solutions for consumers, businesses, and governments deliver connected security for data centers, cloud workloads, networks, and endpoints.

Optimized for leading environments, including Amazon Web Services, Microsoft®, and VMware®, our layered solutions enable organizations to automate the protection of valuable information from today's threats. Our connected threat defense enables seamless sharing of threat intelligence and provides centralized visibility and investigation to make organizations their most resilient.

Trend Micro customers include 9 of the top 10 Fortune® Global 500 companies across automotive, banking, healthcare, telecommunications, and petroleum industries.

With over 6,500 employees in 50 countries and the world's most advanced global threat research and intelligence, Trend Micro enables organizations to secure their connected world. <https://www.trendmicro.com>

Chapter 1

Introduction

This chapter introduces Deep Discovery Analyzer and the new features in this release.

About Deep Discovery Analyzer

Deep Discovery Analyzer is a custom sandbox analysis server that enhances the targeted attack protection of Trend Micro and third-party security products. Deep Discovery Analyzer supports out-of-the-box integration with Trend Micro email and web security products, and can also be used to augment or centralize the sandbox analysis of other products. The custom sandboxing environments that can be created within Deep Discovery Analyzer precisely match target desktop software configurations — resulting in more accurate detections and fewer false positives.

Deep Discovery Analyzer also provides a Web Services API to allow integration with any third-party product, and a manual submission feature for threat research.

What's New

TABLE 1-1. What's New in Deep Discovery Analyzer 7.6

FEATURE/ENHANCEMENT	DETAILS
New hardware model support	This release of Deep Discovery Analyzer supports the new Deep Discovery Analyzer 1300 appliance with UEFI support.
Sandbox as a Service integration	With Sandbox as a Service integration, Deep Discovery Analyzer can receive and analyze samples submitted to Sandbox as a Service.
Enhanced Virtual Analyzer	The internal Virtual Analyzer has been enhanced to include new image support for Windows 10 22H2, Windows 11, and Ubuntu 20.04.
Enhanced Trend Vision One integration	This release of Deep Discovery Analyzer includes STIX files in investigation packages sent to Trend Vision One for intelligence report generation and Auto Sweeping.
Enhanced network share scanning	<p>The network share scanning feature has been enhanced to include configuration settings for the following:</p> <ul style="list-style-type: none"> • Output folder per risk level • Cloud storage server address (AWS/Azure)

FEATURE/ENHANCEMENT	DETAILS
VirusTotal integration	This release of Deep Discovery Analyzer integrates with VirusTotal to query analysis reports for detected samples.
Inline migration from Deep Discovery Analyzer 7.5	On hardware models 1100 and 1200, Deep Discovery Analyzer can automatically migrate the settings of a Deep Discovery Analyzer 7.5 installation to 7.6.

Features and Benefits

Deep Discovery Analyzer includes the following features:

Enable Sandboxing as a Centralized Service

Deep Discovery Analyzer ensures optimized performance with a scalable solution able to keep pace with email, network, endpoint, and any additional source of samples.

Custom Sandboxing

Deep Discovery Analyzer performs sandbox simulation and analysis in environments that match the desktop software configurations attackers expect in your environment and ensures optimal detection with low false-positive rates.

Broad File Analysis Range

Deep Discovery Analyzer examines a wide range of Windows executable, Microsoft Office, PDF, web content, and compressed file types using multiple detection engines and sandboxing.

YARA Rules

Deep Discovery Analyzer uses YARA rules to identify malware. YARA rules are malware detection patterns that are fully customizable to identify targeted attacks and security threats specific to your environment.

Document Exploit Detection

Using specialized detection and sandboxing, Deep Discovery Analyzer discovers malware and exploits that are often delivered in common office documents and other file formats.

Automatic URL Analysis

Deep Discovery Analyzer performs page scanning and sandbox analysis of URLs that are automatically submitted by integrating products.

Detailed Reporting

Deep Discovery Analyzer delivers full analysis results including detailed sample activities and C&C communications via central dashboards and reports.

Alert Notifications

Alert notifications provide immediate intelligence about the state of Deep Discovery Analyzer.

Clustered Deployment

Multiple standalone Deep Discovery Analyzer appliances can be deployed and configured to form a cluster that provides fault tolerance, improved performance, or a combination thereof.

Trend Micro Product Integration

Deep Discovery Analyzer enables out-of-the-box integration to expand the sandboxing capacity of Trend Micro email and web security products.

Sample Submissions

Deep Discovery Analyzer allows sample submissions using one of the following:

- Integrated security products through web services API
- Manual submissions on the management console

- Email submissions from permitted sender domains and SMTP servers
- ICAP clients
- Network share scanning
- Manual Submission Tool

Custom Defense Integration

Deep Discovery Analyzer shares new IOC detection intelligence automatically with other Trend Micro solutions and third-party security products.

ICAP Integration

Deep Discovery Analyzer supports integration with Internet Content Adaptation Protocol (ICAP) clients. After integration, Deep Discovery Analyzer can perform the following functions:

- Work as an ICAP server that analyzes samples submitted by ICAP clients
- Serve User Configuration Pages to the end user when the specified network behavior (URL access / file upload / file download) is blocked
- Control which ICAP clients can submit samples by configuring the ICAP Client list
- Bypass file scanning based on selected MIME content-types
- Bypass file scanning based on true file types
- Bypass URL scanning in RESPMOD mode
- Scan samples using different scanning modules
- Filter sample submissions based on the file types that Virtual Analyzer can process.

Chapter 2

Preparing to Deploy Deep Discovery Analyzer

This chapter discusses the items you need to prepare to deploy Deep Discovery Analyzer and connect it to your network.

If Deep Discovery Analyzer is already deployed on your network and you have a patch or hotfix to apply to it, see the *Deep Discovery Analyzer Administrator's Guide*.

Deployment Overview

Product Specifications

Standard Deep Discovery Analyzer appliances have the following specifications.

Contact Trend Micro if the appliance you are using does not meet these hardware specifications.

Product Specifications - 1100 Appliance

FEATURE	SPECIFICATIONS
Rack size	2U 19-inch standard rack
Availability	Raid 1 configuration
Storage size	4 TB free storage
	 Note The Deep Discovery Analyzer hard drives support hot-swapping.
Connectivity	<ul style="list-style-type: none"> • Management port: 1 x 10Base-T/100Base-TX/1000Base-T • Custom ports: 3 x 10Base-T/100Base-TX/1000Base-T
Dimensions (WxDxH)	48.2 cm (18.98 in) x 75.58 cm (29.75 in) x 8.73 cm (3.44 in)
Maximum weight	31.5 kg (69.45 lb)
Operating temperature	10 °C to 35 °C at 10% to 80% relative humidity (RH)
Power	750W, 120-240 VAC 50/60 Hz

Product Specifications - 1200 Appliance

FEATURE	SPECIFICATIONS
Rack size	2U 19-inch standard rack

FEATURE	SPECIFICATIONS
Availability	Raid 1 configuration
Storage size	4 TB free storage
	 Note The Deep Discovery Analyzer hard drives support hot-swapping.
Connectivity	<ul style="list-style-type: none"> • Management port: 1 x 10Base-T/100Base-TX/1000Base-T • Custom ports: 3 x 10Base-T/100Base-TX/1000Base-T
Dimensions (WxDxH)	48.2 cm (18.98 in) x 75.13cm (29.58 in) x 8.68 cm (3.42 in)
Maximum weight	28.6 kg (63.05 lb)
Operating temperature	10 °C to 35 °C at 10% to 80% relative humidity (RH)
Power	750W , 120-240 VAC 50/60 Hz

Product Specifications - 1300 Appliance

FEATURE	SPECIFICATIONS
Rack size	2U 19-inch standard rack
Availability	Raid 1 configuration
Storage size	4 TB free storage
	 Note The Deep Discovery Analyzer hard drives support hot-swapping.
Connectivity	<ul style="list-style-type: none"> • Management port: 1 x 10Base-T/100Base-TX/1000Base-T • Custom ports: 5 x 10Base-T/100Base-TX/1000Base-T
Dimensions (WxDxH)	48.2 cm (18.98 in) x 75.13cm (29.58 in) x 8.68 cm (3.42 in)

FEATURE	SPECIFICATIONS
Maximum weight	28.82 kg (63.53 lb)
Operating temperature	10 °C to 35 °C at 10% to 80% relative humidity (RH)
Power	1100W , 120-240 VAC 50/60 Hz

Deployment Considerations

Any Deep Discovery Analyzer appliance can be deployed and configured as a standalone appliance. A standalone appliance processes all submitted objects without the assistance of other Deep Discovery Analyzer appliances. It cannot provide continued scanning and analysis services when it encounters an error and is unable to recover.

Multiple standalone Deep Discovery Analyzer appliances can be deployed and configured to form a cluster that provides fault tolerance, improved performance, or a combination thereof.

Depending on your requirements and the number of Deep Discovery Analyzer appliances available, you may deploy the following cluster configurations:

TABLE 2-1. Cluster Configurations

CLUSTER CONFIGURATION	DESCRIPTION
High availability cluster	<p>In a high availability cluster, one appliance acts as the active primary appliance, and one acts as the passive primary appliance. The passive primary appliance automatically takes over as the new active primary appliance if the active primary appliance encounters an error and is unable to recover.</p> <p>For details, see High Availability Cluster on page 2-5.</p>

CLUSTER CONFIGURATION	DESCRIPTION
Load-balancing cluster	<p>In a load-balancing cluster, one appliance acts as the active primary appliance, and any additional appliances act as secondary appliances. The secondary appliances process submissions allocated by the active primary appliance for performance improvement.</p> <p>For details, see Load-Balancing Cluster on page 2-7.</p>
High availability cluster with load balancing	<p>In a high availability cluster with load balancing, one appliance acts as the active primary appliance, one acts as the passive primary appliance, and any additional appliances act as secondary appliances. The passive primary appliance takes over as the active primary appliance if the active primary appliance encounters an error and is unable to recover. The secondary appliances process submissions allocated by the active primary appliance for performance improvement.</p> <p>For details, see High Availability Cluster with Load Balancing on page 2-8.</p>

High Availability Cluster

In a high availability cluster, one appliance acts as the active primary appliance, and one acts as the passive primary appliance. The passive primary appliance automatically takes over as the new active primary appliance if the active primary appliance encounters an error and is unable to recover.

Deploy this cluster configuration if you want to ensure that Deep Discovery Analyzer capabilities remain available even when the appliance encounters an error and is unable to recover.

The following figure shows two Deep Discovery Analyzer appliances deployed in a high availability cluster configuration and how integrating products communicate with Deep Discovery Analyzer.

Note

- Trend Micro recommends updating the firmware on a Deep Discovery Analyzer appliance to the latest version before deployment in a high availability cluster.
 - The active primary appliance and the passive primary appliance must be connected using eth3.
 - Trend Micro recommends using a Category 6 or higher Ethernet cable to directly connect the active primary appliance and passive primary appliance using eth3.
 - Trend Micro recommends directly connecting the active primary appliance and the passive primary appliance to minimize potential points of failures.
 - If the active primary appliance is not connected to the passive primary appliance directly (for example, if they are in different data centers), the following requirements must be met:
 - The appliances must be Deep Discovery Analyzer 1100, 1200, or 1300.
 - The connections between the appliances must meet the following conditions:
 - Network latency is less than 15 ms
 - Packet loss ratio is less than 0.000001%
 - Network bandwidth is greater than 240Mbps
-

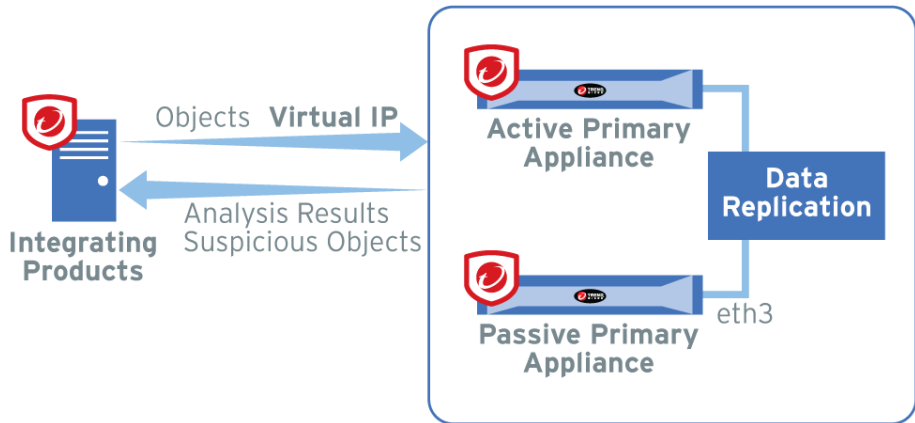

FIGURE 2-1. High Availability Cluster

Load-Balancing Cluster

In a load-balancing cluster, one appliance acts as the active primary appliance, and any additional appliances act as secondary appliances. The secondary appliances process submissions allocated by the active primary appliance for performance improvement.

Deploy this cluster configuration if you require improved object processing performance.

The following figure shows Deep Discovery Analyzer appliances deployed in a load-balancing cluster configuration and how integrating products communicate with Deep Discovery Analyzer.

FIGURE 2-2. Load-Balancing Cluster

High Availability Cluster with Load Balancing

In a high availability cluster with load balancing, one appliance acts as the active primary appliance, one acts as the passive primary appliance, and any additional appliances act as secondary appliances. The passive primary appliance takes over as the active primary appliance if the active primary appliance encounters an error and is unable to recover. The secondary appliances process submissions allocated by the active primary appliance for performance improvement.

Deploy this cluster configuration if you want to combine the benefits of high availability clustering and load-balancing clustering.

The following figure shows Deep Discovery Analyzer appliances deployed in a high availability cluster configuration and how integrating products communicate with Deep Discovery Analyzer.

**Note**

- Trend Micro recommends updating the firmware on a Deep Discovery Analyzer appliance to the latest version before deployment in a high availability cluster.
 - The active primary appliance and the passive primary appliance must be connected using eth3.
 - Trend Micro recommends using a Category 6 or higher Ethernet cable to directly connect the active primary appliance and passive primary appliance using eth3.
 - Trend Micro recommends directly connecting the active primary appliance and the passive primary appliance to minimize potential points of failures.
 - If the active primary appliance is not connected to the passive primary appliance directly (for example, if they are in different data centers), the following requirements must be met:
 - The appliances must be Deep Discovery Analyzer 1100, 1200, or 1300.
 - The connections between the appliances must meet the following conditions:
 - Network latency is less than 15 ms
 - Packet loss ratio is less than 0.000001%
 - Network bandwidth is greater than 240Mbps
-

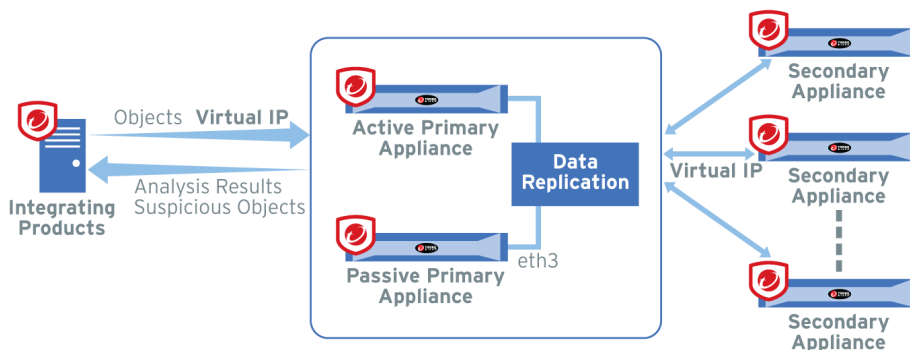

FIGURE 2-3. High Availability Cluster with Load Balancing

Recommended Network Environment

Deep Discovery Analyzer requires connection to a management network, which usually is the organization's intranet. After deployment, administrators can perform configuration tasks from any computer on the management network.

Trend Micro recommends using a custom network for sample analysis. Custom networks ideally are connected to the Internet but may be configured with their own network settings. Deep Discovery Analyzer provides the option to configure proxies for custom networks, as well as providing support for proxy authentication. The networks must be independent of each other so that malicious samples in the custom network do not affect hosts in the management network.

Network Settings

Ports are found at the back of the appliance, as shown in the following image.

Network interface ports include:

- **Management port** (default is eth0): Connects the appliance to the management network

- **Custom port** (a port that is not used as the management port or for high availability): Connects the appliance to custom networks that are reserved for sandbox analysis

Note

- You can configure an interface (default is eth0) or a NIC teaming port as the management port.
- If you are using high availability, eth3 is used to directly connect two identical Deep Discovery Analyzer appliances and cannot be used for sandbox analysis.
- If you are not using high availability, an appliance connected to eth1, eth2, or eth3 can be used for sandbox analysis.

Deep Discovery Analyzer requires one available static IP address in the management network.

If sandbox instances require Internet connectivity during sample analysis, Trend Micro recommends allocating one extra IP address for Virtual Analyzer. The **Sandbox Management > Network Connection** screen allows you to specify static addresses. For more information, see the *Deep Discovery Analyzer Administrator's Guide*.

Deployment Requirements

REQUIREMENT	DETAILS
Deep Discovery Analyzer	Obtain from Trend Micro
Deep Discovery Analyzer installation DVD	Obtain from Trend Micro
Activation Code	Obtain from Trend Micro
Monitor and VGA cable	Connects to the VGA port of the appliance
USB keyboard	Connects to a USB port of the appliance

REQUIREMENT	DETAILS
USB mouse	Connects to a USB port of the appliance
Ethernet cables	<ul style="list-style-type: none">• One cable connects the management port of the appliance to the management network.• One cable connects a custom port to an isolated network that is reserved for sandbox analysis.• If using high availability, one cable connects eth3 to eth3 on an identical appliance.
IP addresses	<ul style="list-style-type: none">• One static IP address in the management network• If sandbox instances require Internet connectivity, one extra IP address for Virtual Analyzer• If using high availability, one extra virtual IP address
Software	Any of the following browsers: <ul style="list-style-type: none">• Microsoft Edge™• Google Chrome™• Mozilla Firefox™
Third-party software licenses	Licenses for all third-party software installed on sandbox images
Pre-requisites for product integration	If integrating with another product, verify that all integration requirements have been met. <ul style="list-style-type: none">• Some integrating products require additional configuration (for example: host names, IP addresses, SSL ports, etc) to integrate with Deep Discovery Analyzer properly. See the product documentation for details.• Some integrating products require an API key provided by Deep Discovery Analyzer. If the Deep Discovery Analyzer API key changes after registering with the integrated product, remove Deep Discovery Analyzer from the integrated product and add it again.• Internet Content Adaptation Protocol (ICAP) clients must comply with RFC 3507.

Logon Credentials

CONSOLE	PURPOSE	DEFAULT CREDENTIALS	YOUR INFORMATION
Preconfiguration console	Perform initial configuration tasks. See Configuring Network Addresses on the Preconfiguration Console on page 4-5 .	<ul style="list-style-type: none"> Deep Discovery Analyzer login (not configurable): <code>admin</code> Password: <code>Admin1234!</code> 	Password:
Management console	<ul style="list-style-type: none"> Configure product settings View and download reports 	<ul style="list-style-type: none"> User name (not configurable): <code>admin</code> Password: <code>Admin1234!</code> 	Password:
		Other user accounts (configured on the management console, in Administration > Accounts / Contacts > Accounts)	User account 1: User name: Password: User account 2: User name: Password:

Ports Used by the Appliance

The following table shows the ports that are used with Deep Discovery Analyzer and why they are used.

TABLE 2-2. Ports used by Deep Discovery Analyzer

PORT	PROTOCOL	FUNCTION	PURPOSE
21	TCP	Outbound	Deep Discovery Analyzer uses this port to send backup data to FTP servers.

PORT	PROTOCOL	FUNCTION	PURPOSE
22	TCP	Listening and outbound	Deep Discovery Analyzer uses this port to: <ul style="list-style-type: none">• Access the preconfiguration console with a computer through SSH• Send backup data to an SFTP server• Send debug logs to an SFTP server
53	TCP/UDP	Outbound	Deep Discovery Analyzer uses this port for DNS resolution.
80	TCP	Listening (disabled by default)	This port is disabled by default. Deep Discovery Analyzer uses this port for the Virtual Analyzer image import tool.
123	UDP	Outbound	Deep Discovery Analyzer connects to the NTP server to synchronize time.
137	UDP	Outbound	Deep Discovery Analyzer uses NetBIOS to resolve IP addresses to host names.
161	UDP	Listening	Deep Discovery Analyzer uses this port to listen for requests from SNMP managers.
162	UDP	Outbound	Deep Discovery Analyzer uses this port to send trap messages to SNMP managers.
443	TCP	Listening	Deep Discovery Analyzer uses this port to: <ul style="list-style-type: none">• Access the management console with a computer through HTTPS• Communicate with other Deep Discovery Analyzer appliances in a cluster environment• Receive files from a computer via the Manual Submission Tool• Receive samples from integrated products• Send Suspicious Objects list and analysis information to integrated products

PORT	PROTOCOL	FUNCTION	PURPOSE
			<p>through the Deep Discovery Analyzer webservice protocol</p> <ul style="list-style-type: none"> • Communicate with Trend Micro Apex Central
		Outbound	<p>Deep Discovery Analyzer uses this port to:</p> <ul style="list-style-type: none"> • Connect to Trend Micro Threat Connect • Connect to Web Reputation Services to query the blocking reason • Connect to Sandbox as a Service for analysis of samples related to Mac OS • Connect to the Predictive Machine Learning engine • Update components by connecting to the ActiveUpdate server • Verify the safety of files through the Certified Safe Software Service • Communicate with Deep Discovery Director - On-premises version • Query Web Reputation Services through the Smart Protection Network • Connect to the Community File Reputation service for file prevalence when analyzing file samples • Connect to the Community Domain/IP Reputation service • Verify the Deep Discovery Analyzer product license through Customer Licensing Portal • Connect to Dynamic URL Scanning • Communicate with Service Gateway to integrate with Trend Vision One • Connect to Azure Blob or AWS S3 for network share scanning

PORT	PROTOCOL	FUNCTION	PURPOSE
User-defined		Listening	Deep Discovery Analyzer uses this user-defined port to: <ul style="list-style-type: none">• Receive samples from ICAP clients using the ICAP protocol• Receive sample submissions through email messages• Allow users to connect to a Virtual Analyzer instance using a VNC client
		Outbound	Deep Discovery Analyzer uses user-defined ports to: <ul style="list-style-type: none">• Send logs to syslog servers• Connect to proxy servers• Connect to the Smart Protection Server• Connect to Microsoft Active Directory servers• Send notifications and scheduled reports through SMTP

Chapter 3

Installing the Appliance

This chapter discusses the Deep Discovery Analyzer installation tasks.

Deep Discovery Analyzer is already installed on new appliances. Perform the tasks only if you need to reinstall or upgrade the firmware.

Installation Tasks

Procedure

1. Prepare the appliance for installation. For details, see [Setting Up the Hardware on page 3-2](#).
 2. Install Deep Discovery Analyzer. For details, see [Installing Deep Discovery Analyzer on a Hardware Appliance With an Optical Drive on page 3-4](#).
 3. Configure the IP address of the appliance on the preconfiguration console. For details, see [Configuring Network Addresses on the Preconfiguration Console on page 4-5](#).
-

Setting Up the Hardware

Procedure

1. Mount the appliance in a standard 19-inch 4-post rack, or on a free-standing object, such as a sturdy desktop.

**Note**

When mounting the appliance, leave at least two inches of clearance on all sides for proper ventilation and cooling.

2. Connect the appliance to a power source.

Deep Discovery Analyzer includes two 750-watt or 1100-watt hot-plug power supply units. One acts as the main power supply and the other as a backup. The corresponding AC power slots are located at the back of the appliance, as shown in the following image.

3. Connect the monitor to the VGA port at the back of the appliance.
4. Connect the keyboard and mouse to the USB ports at the back of the appliance.
5. Connect the Ethernet cables to the management and custom ports.

- **Management port:** A hardware port that connects the appliance to the management network

**Note**

eth0 is the default management port. You can set the management port on a custom port.

For more information, see [Configuring the Management Port on page 4-8](#).

-
- **Custom port:** A hardware port that connects the appliance to an isolated network dedicated to sandbox analysis

**Note**

- If you are using high availability, eth3 is used to directly connect two identical Deep Discovery Analyzer appliances and cannot be used for sandbox analysis.
- If you are not using high availability, an appliance connected to eth1, eth2, or eth3 can be used for sandbox analysis.

-
6. (Optional) Install a fiber network interface card (NIC) into an available full-height, full-length expansion slot and connect the fiber network cable.

Note

- The Deep Discovery Analyzer appliance does not support hot swapping. Turn off the appliance before installing a NIC.

You can install up to two additional NICs on Deep Discovery Analyzer.

- Deep Discovery Analyzer supports up to four additional network ports.
- Install NICs in sequence of the slot numbers on the appliance. You cannot switch an installed NIC with another NIC.

For example, if NIC1 is installed in slot1 and NIC2 in slot2, you cannot switch NIC1 to slot2 and NIC2 to slot1. However, you can switch NIC1 to slot2 and NIC2 to slot3.

7. Power on the appliance.

Note

The power button is found on the front panel of the appliance, behind the bezel.

Installing Deep Discovery Analyzer on a Hardware Appliance With an Optical Drive

Procedure

1. Power on the appliance.

Note

The power button is found on the front panel of the appliance, behind the bezel.

The **power-on self-test (POST)** screen appears.

2. Insert the DVD containing the Deep Discovery Analyzer installation package.

3. Restart the appliance.

The **POST** screen appears.

4. The **Deep Discovery Analyzer Appliance Installation** screen appears.

5. Select **1. Install Appliance** and press ENTER.

- For hardware models that include a serial port, when installing Deep Discovery Analyzer via the serial port, select **2. Install Appliance via Serial Port** and press ENTER.

The **License Agreement** screen appears.

6. Click **Accept**.

The **Select Disk** screen appears.

7. Select the disk on which to install the Deep Discovery Analyzer software.

8. Click **Continue**.

The program checks if the minimum hardware requirements are met, and then displays the **Hardware Profile** screen.

9. Click **Continue**.

WARNING!

Installation involves repartitioning of the disks. All data on the disks are lost.

A confirmation message appears.

10. Click **Continue**.

The installation program repartitions the disks and prepares the environment for installation. Upon completion, the appliance is restarted and Deep Discovery Analyzer software is installed.

Configure the IP address of the appliance on the preconfiguration console to complete the deployment process. For details, see [Configuring Network Addresses on the Preconfiguration Console on page 4-5](#).

Note

It is recommended that you configure iDRAC (Integrated Dell Remote Access) on the appliance to allow remote system management and troubleshooting.

Installing Deep Discovery Analyzer on a Hardware Appliance Without an Optical Drive

For Deep Discovery Analyzer appliances that do not include an optical drive and installation DVD, you can install Deep Discovery Analyzer through the iDRAC (Integrated Dell Remote Access Controller) port.

WARNING!

The installation deletes any existing data or partitions on the selected disk. Back up existing data before installing Deep Discovery Analyzer.

Procedure

1. Download the Deep Discovery Analyzer installation ISO file from the **License** screen on the Business Success Portal at <https://success.trendmicro.com/dcx/s/license>.
2. Connect a computer to the iDRAC port on the Deep Discovery Analyzer appliance. Do the following:
 - a. If the appliance is turned on, power off the appliance.
 - b. Configure the computer to use a static IP address in the network segment 192.168.252.x/24.

**Important**

Do not use the reserved IP addresses 192.168.252.1 and 192.168.252.3.

**Note**

The iDRAC port on the Deep Discovery Analyzer appliance uses the following default network settings:

- IP address: 192.168.252.3
 - Gateway: 192.168.252.1
 - Subnet: 255.255.255.0
-

- c. Connect a monitor to the VGA port and attach a keyboard to a USB port on the appliance.
 - d. Power on the appliance.
-

**Note**

The power button is found on the front panel of the appliance, behind the bezel.

3. Log into the iDRAC interface. Do the following:
 - a. Open a web browser and go to the following address:
`https://192.168.252.3`
The iDRAC login screen appears.
 - b. Specify the login credentials and click **Log In**.
The **Dashboard** appears.
4. Click **Start Virtual Console**.
A console screen appears.
5. Click **Boot** and select **Virtual CD/DVD/ISO**.

6. Click **Virtual Media** and select **Connect Virtual Media**; then, click **Connect Virtual Media**.
7. Under Map CD/DVD, click **Choose File** to select the Deep Discovery Analyzer installation ISO file and click **Map Device**.

The system indicates the device is mapped successfully.

8. On the **Dashboard**, click **Power On System**.

Wait until the **Deep Discovery Analyzer Appliance Installation** screen appears.

9. Select **1. Install Appliance** and press ENTER.

The **License Agreement** screen appears.

10. Click **Accept**.

The **Select Disk** screen appears.

11. Select the disk on which to install the Deep Discovery Analyzer software.

12. Click **Continue**.

The program checks if the minimum hardware requirements are met, and then displays the **Hardware Profile** screen.

13. Click **Continue**.

WARNING!

Installation involves repartitioning of the disks. All data on the disks are lost.

A confirmation message appears.

14. Click **Continue**.

The installation program repartitions the disks and prepares the environment for installation. Upon completion, the appliance is restarted and Deep Discovery Analyzer software is installed.

Configure the IP address of the appliance on the preconfiguration console to complete the deployment process. For details, see [Configuring Network Addresses on the Preconfiguration Console on page 4-5](#).

Chapter 4

Using the Preconfiguration Console

This chapter discusses how to use the Deep Discovery Analyzer preconfiguration console.

The Preconfiguration Console

The preconfiguration console is a Bash-based (Unix shell) interface that allows you to perform the following:

- Configure network settings
- View high availability details
- Test connection to remote hosts using ping
- Collect and upload debug logs
- Reset the admin account and change the preconfiguration console password
- Configure the management port
- Restart or shut down the appliance

The following table describes the tasks you can perform on the preconfiguration console.

TASK	PROCEDURE
Logging on	Type valid logon credentials. The default credentials are: <ul style="list-style-type: none">• User name: <code>admin</code>• Password: <code>Admin1234!</code>
Configuring network addresses for the appliance	Specify the appliance IP address, subnet mask, gateway, and DNS. For details, see Configuring Network Addresses on the Preconfiguration Console on page 4-5 .

TASK	PROCEDURE
Viewing high availability details	<p>View the active and passive appliance host names, IP addresses, and sync status.</p> <hr/> <p> Note High availability cannot be configured on the preconfiguration console. Use the management console to configure high availability. For details see the <i>High Availability Tab</i> and <i>Cluster Tab</i> topics in the <i>Deep Discovery Analyzer Administrator's Guide</i>.</p> <hr/>
Pinging a remote host	Type a valid IP address or FQDN and click Ping .
Changing the preconfiguration console password and reset the admin account	Type the old password and type the new password twice; then, select Save to change the password and reset the admin account (to the unlock state and administrator role).
Enabling and disabling SSH connection	Enabling or disabling the SSH connection.
Collecting and uploading debug logs	Collect debug logs from Deep Discovery Analyzer and upload debug logs to the SFTP server.
Configuring the management port	<p>Select an interface to be the management port.</p> <p>For more information, see Configuring the Management Port on page 4-8.</p>
Restarting	<p>On the Main Menu, select Restart, and press ENTER.</p> <p>On the next screen, select OK and press ENTER.</p>
Powering off	<p>On the Main Menu, select Power off, and press ENTER.</p> <p>On the next screen, select OK and press ENTER.</p>
Logging off	<p>On the Main Menu, select Log off, and press ENTER.</p> <p>On the next screen, select OK and press ENTER.</p>

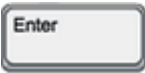

Preconfiguration Console Basic Operations

Use the following keyboard keys to perform basic operations on the preconfiguration console.

Important

Disable scroll lock (using the SCROLL LOCK key on the keyboard) to perform the following operations.

KEYBOARD KEY	OPERATION
Up and Down arrows  	<p>Move between fields.</p> <p>Move between items in a numbered list.</p> <hr/> <p> Note An alternative way of moving to an item is by typing the item number.</p> <hr/> <p>Move between text boxes.</p>
Left and Right arrows  	<p>Move between buttons. Buttons are enclosed in angle brackets <>.</p> <p>Move between characters in a text box.</p>
ENTER 	Click the highlighted item or button.
TAB 	Move between screen sections, where one section requires using a combination of arrow keys (Up, Down, Left, and Right keys).

Configuring Network Addresses on the Preconfiguration Console

Procedure

1. Type valid logon credentials. The default credentials are:

- User name: `admin`
- Password: `Admin1234!`

Note

None of the characters you type appear on the screen.

This password is the same as the password used to log on to the web-based management console. For more information, see [Logon Credentials on page 2-13](#).

The **Main Menu** screen appears.

2. Select **Configure appliance IP address** and press ENTER.

The **Appliance IP Settings** screen appears.

3. Specify the following required settings:

ITEM	GUIDELINES
IPv4 address	<ul style="list-style-type: none"> • Must be in the same subnet as the virtual IP address. • Must not conflict with the following addresses: <ul style="list-style-type: none"> • Sandbox network: Configured in Virtual Analyzer > Sandbox Management > Network Connection • Virtual IP address: Configured in Administration > System Settings > High Availability • Virtual Analyzer: 1.1.0.0/27, 1.1.2.0/24, 192.0.2.0/24, 198.18.0.0/15, 198.51.100.0/24, and 203.0.113.0/24 • Broadcast: 255.255.255.255

ITEM	GUIDELINES
	<ul style="list-style-type: none"> • Multicast: 224.0.0.0 - 239.255.255.255 • Link local: 169.254.1.0 - 169.254.254.255 • Class E: 240.0.0.0 - 255.255.255.255 • Localhost: 127.0.0.1/8 <hr/> <div style="display: flex; align-items: center;">  <div> <p>Note</p> <p>Changing the IP address changes the management console URL.</p> </div> </div> <hr/>
Subnet mask	Must use a standard subnet mask format
IPv4 gateway	Must be in the same subnet as the IP address
IPv4 DNS server 1	Same as IP address
IPv4 DNS server 2 (Optional)	Same as IP address

4. (Optional) Configure the IPv6 settings.
5. Press TAB to navigate to **Save**, and then press ENTER.

The **Main Menu** screen appears after the settings are successfully saved.

Viewing High Availability Details on the Preconfiguration Console

Before you begin

The **High Availability** screen looks different depending on the appliance you log on to.

Use the **High Availability** screen to view details about the high availability configuration.

**Note**

On a passive primary appliance, this screen can be used to detach the appliance from the cluster.

Procedure

1. Type valid logon credentials. The default credentials are:

- User name: `admin`
- Password: `Admin1234!`

**Note**

None of the characters you type appear on the screen.

This password is the same as the password used to log on to the web-based management console. For more information, see [Logon Credentials on page 2-13](#).

The **Main Menu** screen appears.

2. Select **View high availability details** and press ENTER.

The **High Availability** screen appears.

The following table shows the on-screen labels and high availability configuration details.

TABLE 4-1. High Availability Screen

LABEL	DETAIL
Mode	Cluster mode of the appliance.
Status	Sync status of the passive primary appliance.
Host name	Host name of the appliance.
Management IP address	Management IP address of the appliance.

LABEL	DETAIL
IPv4 virtual address	IPv4 virtual address of the active primary appliance.
IPv6 virtual address	IPv6 virtual address of the active primary appliance.

3. (Optional) On the passive primary appliance, press TAB to navigate to **Detach**, and then press ENTER to detach the passive primary appliance.

**Note**

Detaching the passive primary appliance disables high availability.

4. Press TAB to navigate to **Back**, and then press ENTER.

The **Main Menu** screen appears.

Configuring the Management Port

You can use the preconfiguration console to set the management port on the selected interface.

Procedure

1. Type valid logon credentials. The default credentials are:

- User name: `admin`
 - Password: `Admin1234!`
-

**Note**

None of the characters you type appear on the screen.

This password is the same as the password used to log on to the web-based management console. For more information, see [Logon Credentials on page 2-13](#).

The **Main Menu** screen appears.

2. Select **Configure management port** and press ENTER.

The **Configure Management Port** screen appears.

3. Press TAB to navigate to the interface that you want to use as the management port, and then press ENTER.

**Note**

- The port list includes the default management port eth0.
- If eth0 is in a NIC team and you select eth0 as the management port, the NIC team is automatically disabled.

-
4. Press TAB to navigate to **Save**, and then press ENTER.

The **Main Menu** screen appears after the setting is successfully saved.

Chapter 5

Upgrading Deep Discovery Analyzer

This chapter discusses how to upgrade the firmware from previous Deep Discovery Analyzer versions.

Upgrading Firmware on an Appliance

From time to time, Trend Micro releases a new firmware version for a reported known issue or an upgrade that applies to the product. Find available firmware versions at <http://downloadcenter.trendmicro.com>.

Deep Discovery Analyzer 7.6 supports direct migration of data and configuration settings from the following versions:

- Deep Discovery Analyzer 7.2

Note

After applying the firmware update on hardware models 1100 and 1200, Deep Discovery Analyzer automatically migrates the settings of a Deep Discovery Analyzer 7.2 installation to 7.5.

You can upgrade the firmware on Deep Discovery Analyzer using one of the following methods:

- The Deep Discovery Analyzer management console
- Plan deployment from Deep Discovery Director. For more information, see the Deep Discovery Director documentation.

Important

If you have multiple Deep Discovery Analyzer appliances deployed and configured to form a cluster, see the migration tasks in [Upgrading Firmware on Appliances in a Cluster on page 5-4](#).

Note

Ensure that you have finished all management console tasks before proceeding. The upgrade process may take some time to complete.

Procedure

1. Obtain the firmware image.
 - Download the Deep Discovery Analyzer firmware image from the Trend Micro Download Center at:
<http://downloadcenter.trendmicro.com>
 - Obtain the firmware package from your Trend Micro reseller or support provider.
2. On the logon page of the management console, select **Enable extended session timeout** and then log on using a valid user name and password.
3. Back up configuration settings. Do the following:
 - a. Go to **Administration > System Maintenance** and click the **Back Up** tab.
 - b. Click **Export**.
4. Go to **Administration > Updates**, and then click the **Firmware** tab.
5. Click **Choose File** or **Browse**, and then select the firmware upgrade file.
6. Click **Install**.

The screen displays the firmware upgrade status.

Important

Do not close or refresh the browser, navigate to another page, perform tasks on the management console, or power off the appliance until updating is complete.

Deep Discovery Analyzer will automatically restart after the firmware upgrade is complete.

-
7. Clear the browser cache before you access the management console.
-

Upgrading Firmware on Appliances in a Cluster

If you have multiple Deep Discovery Analyzer appliances deployed and configured to form a cluster, follow the procedure for the cluster configuration to upgrade the Deep Discovery Analyzer appliances.

TABLE 5-1. Firmware upgrade procedures for appliances in a cluster

CLUSTER CONFIGURATION	TASKS
High availability cluster	<ol style="list-style-type: none"> 1. Detach the passive primary appliance. 2. Individually upgrade both the active primary appliance and the passive primary appliance. For more information, see Upgrading Firmware on an Appliance on page 5-2. 3. Add the passive primary appliance to the cluster again.
Load-balancing cluster	Individually upgrade all Deep Discovery Analyzer appliances.
High availability cluster with load balancing	<ol style="list-style-type: none"> 1. Detach the passive primary appliance. 2. Individually upgrade both the active primary appliance and the passive primary appliance. For more information, see Upgrading Firmware on an Appliance on page 5-2. 3. Add the passive primary appliance to the cluster again. 4. Individually upgrade all secondary appliances. For more information, see Upgrading Firmware on an Appliance on page 5-2.

Chapter 6

Technical Support

Learn about the following topics:

- *Troubleshooting Resources on page 6-2*
- *Contacting Trend Micro on page 6-3*
- *Sending Suspicious Content to Trend Micro on page 6-4*
- *Other Resources on page 6-5*

Troubleshooting Resources

Before contacting technical support, consider visiting the following Trend Micro online resources.

Using the Support Portal

The Trend Micro Support Portal is a 24x7 online resource that contains the most up-to-date information about both common and unusual problems.

Procedure

1. Go to <https://success.trendmicro.com>.
2. Select from the available products or click the appropriate button to search for solutions.
3. Use the **Search Support** box to search for available solutions.
4. If no solution is found, click **Contact Support** and select the type of support needed.

Tip

To submit a support case online, visit the following URL:

<https://success.trendmicro.com/smb-new-request>

A Trend Micro support engineer investigates the case and responds in 24 hours or less.

Threat Encyclopedia

Most malware today consists of blended threats, which combine two or more technologies, to bypass computer security protocols. Trend Micro combats this complex malware with products that create a custom defense strategy. The Threat Encyclopedia provides a comprehensive list of names and symptoms for various blended threats, including known malware, spam, malicious URLs, and known vulnerabilities.

Go to <https://www.trendmicro.com/vinfo/us/threat-encyclopedia/#malware> to learn more about:

- Malware and malicious mobile code currently active or "in the wild"
- Correlated threat information pages to form a complete web attack story
- Internet threat advisories about targeted attacks and security threats
- Web attack and online trend information
- Weekly malware reports

Contacting Trend Micro

In the United States, Trend Micro representatives are available by phone or email:

Address	Trend Micro, Incorporated 225 E. John Carpenter Freeway, Suite 1500 Irving, Texas 75062 U.S.A. ※ ※
Phone	Phone: +1 (817) 569-8900 Toll-free: (888) 762-8736
Website	https://www.trendmicro.com
Email address	support@trendmicro.com

- Worldwide support offices:
<https://www.trendmicro.com/us/about-us/contact/index.html>
- ※
- ※
- Trend Micro product documentation:

<https://docs.trendmicro.com>

Speeding Up the Support Call

To improve problem resolution, have the following information available:

- Steps to reproduce the problem
- Appliance or network information
- Computer brand, model, and any additional connected hardware or devices
- Amount of memory and free hard disk space
- Operating system and service pack version
- Version of the installed agent
- Serial number or Activation Code
- Detailed description of install environment
- Exact text of any error message received

Sending Suspicious Content to Trend Micro

Several options are available for sending suspicious content to Trend Micro for further analysis.

Email Reputation Services

Query the reputation of a specific IP address and nominate a message transfer agent for inclusion in the global approved list:

<https://servicecentral.trendmicro.com/en-us/ers/>

Refer to the following Knowledge Base entry to send message samples to Trend Micro:

<https://success.trendmicro.com/solution/1112106>

File Reputation Services

Gather system information and submit suspicious file content to Trend Micro:

<https://success.trendmicro.com/solution/1059565>

Record the case number for tracking purposes.

Web Reputation Services

Query the safety rating and content type of a URL suspected of being a phishing site, or other so-called "disease vector" (the intentional source of Internet threats such as spyware and malware):

<https://global.sitesafety.trendmicro.com/>

If the assigned rating is incorrect, send a re-classification request to Trend Micro.

Other Resources

In addition to solutions and support, there are many other helpful resources available online to stay up to date, learn about innovations, and be aware of the latest security trends.

Download Center

From time to time, Trend Micro may release a patch for a reported known issue or an upgrade that applies to a specific product or service. To find out whether any patches are available, go to:

<https://www.trendmicro.com/download/>

If a patch has not been applied (patches are dated), open the Readme file to determine whether it is relevant to your environment. The Readme file also contains installation instructions.

Documentation Feedback

Trend Micro always seeks to improve its documentation. If you have questions, comments, or suggestions about this or any Trend Micro document, please go to the following site:

<https://docs.trendmicro.com/en-us/survey.aspx>

Appendix A

Appendices

This section includes the following topics:

- *The Management Console on page A-2*
- *Getting Started Tasks on page A-8*
- *Resetting the Default admin Account on page A-37*

The Management Console

Deep Discovery Analyzer provides a built-in management console that you can use to configure and manage the product.

Open the management console from any computer on the management network using one of the following web browsers:

- Microsoft Edge™
- Google Chrome™
- Mozilla Firefox™

Note

Make sure Javascript is enabled in the web browser.

To log on, open a browser window and type the following URL:

`https://<Appliance IP Address>/pages/login.php`

You can log on to the Deep Discovery Analyzer management console using one of the following methods:

- [Logging On Using Local Accounts on page A-2](#)
- [Logging On With Single Sign-On on page A-8](#)

Logging On Using Local Accounts

Procedure

1. On the **Log On** screen, type the logon credentials (user name and password) for the management console.

Use the default administrator logon credentials when logging on for the first time:

- User name: `admin`
- Password: `Admin1234!`

**Note**

Depending on your account, provide one of the following information in the **User name** field:

- User name
 - UPN
 - Email address
-

2. (Optional) Select **Enable extended session timeout** to apply the extended session timeout for your logon session. The default session timeout is 10 minutes.

To change the session timeout settings, navigate to **Administration** > **System Settings** and click the **Session Timeout** tab.

3. Click **Log On**.
 4. If this is the first time you log on, change the account password before you can access the management console.
-

Accounts Tab

Use the **Accounts** tab to create and manage user accounts.

**Note**

- In a cluster environment, the secondary Deep Discovery Analyzer appliance synchronizes all local user accounts (except the default administrator account (admin)) from the active primary appliance.
 - If a synchronized account is used to log into the management console on the secondary appliance and the user has not changed the account password, the system prompts the user to change the account password.
-

Procedure

1. Go to **Administration** > **Accounts / Contacts**.

2. Click the **Accounts** tab.
3. Use the following options to manage user accounts:

- To add a new user account, click **Add**.

The **Add Account** window opens. For details, see [Configuring User Accounts on page A-5](#).

- To delete an account, select one or more user accounts and click **Delete**.

Important

- You cannot delete the default Deep Discovery Analyzer administrator account.
- You cannot delete the logged-on account.

-
- To manually unlock an account, select a user account and click **Unlock**.

Deep Discovery Analyzer includes a security feature that locks an account in case the user typed an incorrect password five times in a row. This feature cannot be disabled. Locked accounts automatically unlock after ten minutes. The administrator can manually unlock accounts that have been locked.

Only one user account can be unlocked at a time.

4. To make changes to an existing account, click the user name of the account.

The **Edit Account** window opens. For details, see [Configuring User Accounts on page A-5](#).

5. If there are many entries in the table, use the following options to manage the user accounts list:

- Select an account type from the **Type** drop down to show only the accounts for a specific type.

- Click the **Name** column to sort names alphabetically.
- Type a few characters in the **Search** text box to narrow down the entries. As you type, the entries that match the characters you typed are displayed. Deep Discovery Analyzer searches all cells in the current page for matches.
- The panel at the bottom of the screen shows the total number of user accounts. If all user accounts cannot be displayed at the same time, use the pagination controls to view the accounts that are hidden from view.

Configuring User Accounts

Procedure

1. Go to **Administration > Accounts / Contacts**, and then go to the **Account** tab.
2. Do one of the following:
 - Click **Add** to create a new user account.
 - Click the name of an existing user account to change the account settings.
3. To add a local account, select **Local user** as the account **Type** and provide the following details.
 - **Name:** Name of the account owner.
 - **User name:** User name supports a maximum of 40 characters.

Note

The user name is case insensitive for new account creation and management console logon process.

- **Password:** Type a password that contains at least 8 characters and includes uppercase letters, lowercase letters, numbers, and special characters.

**Note**

- To increase password complexity requirements, configure the global password policy in **Administration > System Settings > Password Policy** tab. The password policy is displayed in the window and must be satisfied before you can add a user account.
 - When a user exceeds the number of retries allowed while entering incorrect passwords, Deep Discovery Analyzer sets the user account to inactive (locked). You can unlock the account on the **Accounts** screen.
-

- **Confirm password:** Type the password again.
 - (Optional) **Description:** Description supports a maximum of 40 characters.
-

**Note**

If a new local user account is used to log into the management console for the first time, the system will prompt the user to change the account password.

4. To add an Active Directory user, select **Active Directory user** as the account **Type**, and provide the following details.
 - **User name or group:** Specify the User Principal Name (UPN) or user group name.
-

**Note**

To quickly locate a specific user name or group, type a few characters in the text box and click **Search**.

- (Optional) **Description:** Description supports a maximum of 40 characters.
5. To change the password of a local account, select **Change password** and configure the required fields.

**Note**

- If you are logged in as an administrator, you can change the password of a local user account by typing the new password twice. You do not have to provide the original password for the local user account.
 - If the password of a local user account is changed by an administrator, the system will prompt the user to change the account password again upon login.
-

6. Select the role and associated permissions of the user account.
 - **Administrator:** Users have full access to submitted objects, analysis results, and product settings
 - **Investigator:** Users can reanalyze submitted objects, submit objects, and download the investigation package (including submitted objects), and have read-only access to analysis results and product settings
 - **Operator:** Users have read-only access to submitted objects, analysis results, and product settings
 7. (Optional) Select **Add to contacts** to add the user account to the **Contacts** list, and provide the following details:
-

**Note**

Contacts receive email alert notifications by default.

- **Email address**
 - (Optional) **Phone number**
8. Click **Save**.
-

Logging On With Single Sign-On

If you configure the required settings for SAML integration on Deep Discovery Analyzer, users can access the Deep Discovery Analyzer management console using their existing identity provider credentials.

For more information, see the Deep Discovery Analyzer Administrator's Guide.

Procedure

1. On the **Log On** screen, select a service name from the drop-down list.
2. Click **Single Sign-on (SSO)**.

The system automatically navigates to the logon page for your organization.

3. Follow the on-screen instructions and provide your account credentials to access the Deep Discovery Analyzer management console.
-

Getting Started Tasks

Procedure

1. Activate the product license using a valid Activation Code. For details, see [License on page A-9](#).
2. Specify the Deep Discovery Analyzer host name and IP address. For details, see [Network Tab on page A-12](#).
3. Configure proxy settings if Deep Discovery Analyzer connects to the management network or Internet through a proxy server. For details, see [Proxy Tab on page A-14](#).
4. Configure date and time settings to ensure that Deep Discovery Analyzer features operate as intended. For details, see [Time Tab on page A-15](#).
5. Configure SMTP settings to enable sending of notifications through email. For details, see [SMTP Tab on page A-16](#).

6. Import sandbox instances to Virtual Analyzer. For details, see [Images Tab on page A-18](#).
 7. Configure Virtual Analyzer network settings to enable sandbox instances to connect to external destinations. For details, see [Enabling External Connections on page A-21](#).
 8. (Optional) Configure sample submission policies based on your network environment and submission sources. By default, samples of all file types are submitted to all sandbox instances.
For details, see the Deep Discovery Analyzer Administrator's Guide.
 9. (Optional) Deploy and configure additional Deep Discovery Analyzer appliances for use in a high availability or load-balancing cluster. For details, see [Cluster Tab on page A-23](#).
 10. Configure supported Trend Micro products for integration with Deep Discovery Analyzer.
For details, see the Deep Discovery Analyzer Administrator's Guide.
 11. Adjust Virtual Analyzer resource allocation between all sources by assigning weight and timeout values to all sources that submit objects to Deep Discovery Analyzer for analysis.
For details, see the Deep Discovery Analyzer Administrator's Guide.
-

License

Use the **License** screen, in **Administration > License**, to view, activate, and renew the Deep Discovery Analyzer license.

The Deep Discovery Analyzer license includes product updates (including ActiveUpdate) and basic technical support (“Maintenance”) for one (1) year from the date of purchase. The license allows you to upload threat samples for analysis, and to access Trend Micro Threat Connect from Virtual Analyzer. In addition, the license allows you to send samples to the Trend Micro cloud sandboxes for analysis.

After the first year, Maintenance must be renewed on an annual basis at the current Trend Micro rate.

A Maintenance Agreement is a contract between your organization and Trend Micro. It establishes your right to receive technical support and product updates in return for the payment of applicable fees. When you purchase a Trend Micro product, the License Agreement you receive with the product describes the terms of the Maintenance Agreement for that product.

The Maintenance Agreement has an expiration date. Your License Agreement does not. If the Maintenance Agreement expires, you will no longer be entitled to receive technical support from Trend Micro or access Trend Micro Threat Connect.

Typically, 90 days before the Maintenance Agreement expires, you will start to receive email notifications, alerting you of the pending discontinuation. You can update your Maintenance Agreement by purchasing renewal maintenance from your Reseller, Trend Micro sales, or on the Trend Micro Customer Licensing Portal at:

<https://clp.trendmicro.com/fullregistration>

The **License** screen includes the following information and options.

TABLE A-1. Product Details

FIELD	DETAILS
Product name	Displays the name of the product.
Firmware version	Displays the full build number of the product.
License agreement	Displays a link to the Trend Micro License Agreement . Click the link to view or print the license agreement.

TABLE A-2. License Details

FIELD	DETAILS
Activation Code	View the Activation Code in this section. If your license has expired, obtain a new Activation Code from Trend Micro. To renew the license, click New Activation Code , and type the new Activation Code. The License screen reappears displaying the number of days left before the product expires.

FIELD	DETAILS
Status	<p>Displays either Activated, Not Activated, Grace Period, Expired, or Evaluation Expired.</p> <p>Click View details online to view detailed license information from the Trend Micro website. If the status changes (for example, after you renewed the license) but the correct status is not indicated in the screen, click Refresh.</p>
Type	<ul style="list-style-type: none"> • Full: Provides access to all product features • Evaluation: Provides access to all product features
Expiration date	View the expiration date of the license. Renew the license before it expires.

The following table describes the consequences when the product license expires.

TABLE A-3. License expiry

LICENSE TYPE	STATUS	DETAILS
Full	Grace period	Technical support and component updates are available.
Full	Expired	<p>Technical support and component updates are not available.</p> <p>Deep Discovery Analyzer still analyzes samples using out-of-date components. These components may not be able to protect your network completely from the latest security risks.</p>
Evaluation	Expired	<p>Deep Discovery Analyzer disables the following:</p> <ul style="list-style-type: none"> • Component updates • Virtual Analyzer sample analysis • Trend Micro Sandbox for macOS sample analysis

Network Tab

Use this screen to configure the host name, the IPv4 and IPv6 addresses of the Deep Discovery Analyzer appliance, and other network settings (including the enforcement of TLS 1.2 or above).

An IPv4 address is required and the default is 192 . 168 . 252 . 2. Modify the IPv4 address immediately after completing all deployment tasks.

Deep Discovery Analyzer uses the specified IP addresses to connect to the Internet when accessing Trend Micro hosted services, including the Smart Protection Network, the ActiveUpdate server, and Threat Connect. The IP addresses also determine the URLs used to access the management console.

You can select **Always use TLS 1.2 or above** to enhance data security for inbound and outbound connections on Deep Discovery Analyzer.

**Note**

- To be compliant with the Payment Card Industry Data Security Standard (PCI-DSS) v3.2, the appliance should use only TLS 1.2 or above for all inbound and outbound connections.
 - Before you can configure this option, verify that the Deep Discovery Analyzer appliance is not in a high availability cluster. Detach passive primary appliances from the cluster at **Administration > System Settings > Cluster**.
 - Ensure that the integrated products and services are using the latest version that supports TLS 1.2. For details, see the Deep Discovery Analyzer Administrator's Guide.
 - Verify that the following products/services are configured to use TLS 1.2 or above.
 - The ActiveUpdate server source at **Administration > Updates > Component Update Settings** must use HTTPS.
 - The ICAP settings at **Administration > Integrated Products/Services > ICAP** must use ICAP over SSL.
 - The syslog servers at **Administration > Integrated Products/Services > Syslog** must use SSL.
 - The Email Submission settings at **Administration > Integrated Products/Services > Email Submission** must use SSL/TLS or STARTTLS.
 - The SMTP server at **Administration > System Settings > SMTP** must use SSL/TLS or STARTTLS.
-

The following table lists configuration limitations.

TABLE A-4. Configuration Limitations

FIELD	LIMITATION
Host name	Cannot be modified when using high availability
IPv4 address	<ul style="list-style-type: none"> • Must differ from IPv4 virtual address • Must be in the same network segment as IPv4 virtual address
IPv6 address	<ul style="list-style-type: none"> • Must differ from IPv6 virtual address • Must be in the same network segment as IPv6 virtual address • Cannot be deleted if IPv6 virtual address has been configured • Cannot be added or deleted when using high availability

Proxy Tab

Specify proxy settings if Deep Discovery Analyzer connects to the Internet or management network through a proxy server.

Configure the following settings.

TABLE A-5. Proxy Tab Tasks

TASK	STEPS
Use an HTTP proxy server	Select this option to enable proxy settings.
Server name or IP address	Type the proxy server host name or IPv4 address, or IPv6 address. The management console does not support host names with double-byte encoded characters. If the host name includes such characters, type its IP address instead.
Port	Type the port number that Deep Discovery Analyzer uses to connect to the proxy server.

TASK	STEPS
Proxy server requires authentication	Select this option if the connection to the proxy server requires authentication. Deep Discovery Analyzer supports the following authentication methods: <ul style="list-style-type: none"> • No authentication • Basic authentication • Digest authentication • NTLMv1 authentication
User name	Type the user name used for authentication. <hr/>  Note This option is only available if Proxy server requires authentication is enabled. <hr/>
Password	Type the password used for authentication. <hr/>  Note This option is only available if Proxy server requires authentication is enabled. <hr/>

Time Tab

Configure date and time settings immediately after installation.

Procedure

1. Go to **Administration > System Settings** and click the **Time** tab.
The **Time** screen appears.
2. Click **Set date and time**.
The settings panel appears.
3. Select one of the following methods and configure the applicable settings.

- Select **Connect to an NTP server** and type the host name, IPv4 address, or IPv6 address of the NTP server.
 - Select **Set manually** and configure the time.
4. Click **Save**.
 5. Click **Set time zone**.
The settings panel appears.
 6. Select the applicable time zone.

Note

Daylight Saving Time (DST) is used when applicable.

7. Click **Save**.
 8. Click **Set format**.
The settings panel appears.
 9. Select the preferred date and time format.
 10. Click **Save**.
-

SMTP Tab

Deep Discovery Analyzer uses SMTP settings when sending notifications through email.

Procedure

1. Go to **Administration > System Settings** and click the **SMTP** tab.
2. Specify the following details:

TABLE A-6. SMTP Tab Tasks

FIELD	STEPS
Server address	Type the SMTP server host name, IPv4 address, or IPv6 address. The management console does not support host names with double-byte encoded characters. If the host name includes such characters, type its IP address instead.
Port	Type the port number used by the SMTP server.
Connection security	Specify the type of security used for the connection. Available values are: None, STARTTLS, SSL/TLS.
Sender email address	Type the email address of the sender.
SMTP server requires authentication	<p>If the server requires authentication, select SMTP server requires authentication and specify a user name and password.</p> <hr/> <p> WARNING! Ensure that the user name and password to be specified is valid for the SMTP server. Connections made using an incorrect user name and password may cause some SMTP servers to reject all network request originating from the Deep Discovery Analyzer server.</p> <hr/>

3. (Optional) To test the connection to the external SMTP server, do the following:
 - a. Click **Test Connection**.
 - b. Type the recipient email address.
 - c. Click **OK**.

**Note**

Deep Discovery Analyzer does not send a test email message to the recipient.

4. Click **Save**.

Images Tab

Virtual Analyzer does not contain any images by default. To analyze samples, you must prepare and import at least one image in the Open Virtual Appliance (OVA) format.

You can use existing VirtualBox or VMware images, or create new images using VirtualBox. For details, see Chapters 2 and 3 of the *Virtual Analyzer Image Preparation User's Guide* at <http://docs.trendmicro.com/en-us/enterprise/virtual-analyzer-image-preparation.aspx>.

Before importing, validate and configure images using the Virtual Analyzer Image Preparation Tool. For details, see Chapter 4 of the *Virtual Analyzer Image Preparation User's Guide*.

The hardware specifications of your product determine the number of images that you can import and the number of instances that you can deploy per image.

You can view the following information on the **Images** screen:

- The number of configured instances for an image
- The number of instances in use

The following table describes the tasks that you can perform on the **Images** screen.

TASK	DESCRIPTION
Import an image	<p>Click Import to upload a new Virtual Analyzer image.</p> <p>For more information, see Importing an Image on page A-19.</p> <hr/> <p> Note For Linux images, Deep Discovery Analyzer supports CentOS 7.8, RedHat 7.9, and RedHat 8.3 only.</p>

TASK	DESCRIPTION
Export an image	Select an image and click Export .
Change the image name or the number of sandbox instances	Select an image and click Modify . For more information, see the <i>Deep Discovery Analyzer Administrator's Guide</i> .
Display entries by platform	Select an option from the Platform drop-down list.

Importing an Image

You can import up to four images (one Linux and three Windows images). The hardware specifications of your product determine the number of images that you can import and the number of instances that you can deploy per image.

Virtual Analyzer supports OVA files up to 30GB in size.

Important

Virtual Analyzer stops analysis and keeps all samples in the queue whenever an image is added or deleted, or when instances are modified.

Procedure

1. Go to **Virtual Analyzer > Sandbox Management** and click the **Images** tab.
The **Images** screen appears.
2. Click **Import**.
The **Import Image** screen appears.
3. Select a **Platform** option.
4. Select an image source and configure the applicable settings.

- a. Type a permanent image name with a maximum of 50 characters.
 - b. Choose the number of instances to allocate for the image.
 - c. Type the URL or network share path of the OVA file.
 - d. (Optional) Select **Connect through a proxy sever**.
 - e. (Optional) Type the logon credentials if authentication is required.
5. Click **Import**.

Virtual Analyzer validates the OVA files before starting the import process.

Note

- If you selected **HTTP/HTTPS or FTP server**, Deep Discovery Analyzer downloads the images first before importing into Virtual Analyzer. The process can only be canceled before the download completes.
 - Deep Discovery Analyzer supports connection to a source HTTP / HTTPS server that complies with HTTP/1.0 or later.
-

Importing an Image Using the Virtual Analyzer Image Import Tool

Virtual Analyzer supports OVA files that are between 1 GB and 30 GB in size.

Procedure

1. Go to **Virtual Analyzer > Sandbox Management** and click the **Images** tab.
2. Click **Import**.
3. Select a **Platform** option.
4. For **Source**, select **Image import tool**.
5. Click **Download** to download the image import tool.

6. Open the file `VirtualAnalyzerImageImportTool.exe`.
 7. Type the IP address for Deep Discovery Analyzer.
Deep Discovery Analyzer deploys instances immediately after an image uploads. Wait for the instance deployment to complete.
-

The image import process may stop or be considered unsuccessful because of the following reasons:

- No connection is established. The product may be busy.
- The connection to the appliance was interrupted.
- The connection timed out.
- Memory allocation was unsuccessful.
- Windows socket initialization was unsuccessful.
- The image file is corrupt.
- The image upload did not complete.
- The image upload was cancelled.

Enabling External Connections

Sample analysis is paused and settings are disabled whenever Virtual Analyzer is being configured.

Procedure

1. Go to **Virtual Analyzer > Sandbox Management** and click the **Network Connection** tab.
The **Network Connection** screen appears.
2. Select **Enable external connections**.
The settings panel appears.
3. Select the type of connection to be used by sandbox instances.

- Custom: Any user-defined network

Important

Trend Micro recommends using an environment isolated from the management network.

- Management network: Default organization Intranet

WARNING!

Enabling connections to the management network may result in malware propagation and other malicious activity in the network.

4. If you selected **Custom**, specify the following:
 - Network adapter: Select an adapter with a linked state.
 - IP address: Type an IPv4 address.
 - Subnet mask
 - Gateway
 - DNS
 5. If the sandbox requires a proxy server for network connection, select **Use a dedicated proxy server**, and specify the following.
 - Server address
 - Port
 - User name: This option is only available if **Proxy server requires authentication** is enabled.
 - Password: This option is only available if **Proxy server requires authentication** is enabled.
 6. Click **Save**.
-

Cluster Tab

Multiple standalone Deep Discovery Analyzer appliances can be deployed and configured to form a cluster that provides fault tolerance, improved performance, or a combination thereof.

Depending on your requirements and the number of Deep Discovery Analyzer appliances available, you may deploy the following cluster configurations:

TABLE A-7. Cluster Configurations

CLUSTER CONFIGURATION	DESCRIPTION
High availability cluster	<p>In a high availability cluster, one appliance acts as the active primary appliance, and one acts as the passive primary appliance. The passive primary appliance automatically takes over as the new active primary appliance if the active primary appliance encounters an error and is unable to recover.</p>
Load-balancing cluster	<p>In a load-balancing cluster, one appliance acts as the active primary appliance, and any additional appliances act as secondary appliances. The secondary appliances process submissions allocated by the active primary appliance for performance improvement.</p> <hr/> <p> Note For all Deep Discovery Analyzer functions to operate properly in a load-balancing environment, make sure the primary and secondary appliances can communicate with each other.</p> <hr/>
High availability cluster with load balancing	<p>In a high availability cluster with load balancing, one appliance acts as the active primary appliance, one acts as the passive primary appliance, and any additional appliances act as secondary appliances. The passive primary appliance takes over as the active primary appliance if the active primary appliance encounters an error and is unable to recover. The secondary appliances process submissions allocated by the active primary appliance for performance improvement.</p>

The following table lists the available configuration modes and associated appliance behavior.

TABLE A-8. Cluster Configuration Modes

CONFIGURATION MODE	DESCRIPTION
Primary (Active)	<ul style="list-style-type: none">• Management console is fully accessible• Retains all configuration settings
Primary (Passive)	<ul style="list-style-type: none">• Management console is unavailable• Automatically configured based on the settings of the active primary appliance• On standby• Takes over as the active primary appliance if the active primary appliance encounters an error and is unable to recover• Does not process submissions

CONFIGURATION MODE	DESCRIPTION
Secondary	<ul style="list-style-type: none"> • Automatically configured based on the settings of the active primary appliance • Identifies the active primary appliance using its IP address or virtual IP address • Processes submissions allocated by the active primary appliance for performance improvement • Management console only shows screens with configurable settings: <ul style="list-style-type: none"> • Virtual Analyzer > Sandbox Management > Network Connection • Virtual Analyzer > Sandbox Management > Sandbox for macOS • Administration > Updates > Hotfixes / Patches • Administration > Updates > Firmware • Administration > Integrated Products/Services > SAML Authentication • Administration > System Settings > Network • Administration > System Settings > Network Interface • Administration > System Settings > HTTPS Certificate • Administration > System Settings > Cluster • Administration > Accounts / Contacts > Accounts • Administration > System Logs • Administration > System Maintenance > Network Services Diagnostics • Administration > System Maintenance > Power Off / Restart • Administration > System Maintenance > Debug • Administration > License

**Note**

In environments that use a load-balancing cluster or a High Availability cluster with load balancing, Deep Discovery Analyzer automatically slows down Virtual Analyzer throughput on the active primary appliance to prevent exhaustion of system resources

Nodes List

The **Nodes** list is displayed on the active primary appliance.

The Nodes list contains the following information:

TABLE A-9. Nodes List Columns

COLUMN	DESCRIPTION
Status	Connection status of the appliance. Mouseover a status icon to view details.
Mode	Cluster mode of the appliance.
Management IP Address	Management IP address of the appliance.
Host Name	Host name of the appliance.
Last Connected	<p>Date and time that the appliance last connected to the active primary appliance.</p> <hr/> <p> Note No data (indicated by a dash) if the appliance is a passive primary appliance.</p> <hr/>
Details	<p>Additional details about the operational status of the appliance.</p> <ul style="list-style-type: none"> • For standalone appliance: <ul style="list-style-type: none"> • Standalone appliance: The appliance is a standalone appliance. • For passive primary appliance:

COLUMN	DESCRIPTION
	<ul style="list-style-type: none"> • Fully synced: The passive primary appliance is fully synced to the active primary appliance. • Syncing n%: The passive primary appliance is syncing settings from the active primary appliance. • Sync error: The passive primary appliance is unable to connect to the active primary appliance. Verify that the appliances are directly connected using eth3, and that eth3 is not used for sandbox analysis. <hr/> <p> Tip This field also displays the connection latency and throughput information.</p> <hr/> <ul style="list-style-type: none"> • For secondary appliances: <ul style="list-style-type: none"> • Inconsistent component version: One or more components have different versions on the active primary appliance and secondary appliance. Use the same component versions on all appliances. • Not connected: The active primary appliance did not receive a heartbeat from the secondary appliance within the last 10 seconds. Verify that the secondary appliance is powered on and able to connect to the active primary appliance through the network. • Invalid API key: The secondary appliance is configured with an invalid API key. Verify the Active primary API key on the secondary appliance. • Incompatible software version: The firmware, hotfix, and patch versions on the active primary appliance and secondary appliance are different. Use the same firmware, hotfix, and patch version on all appliances. • Unexpected error: An unexpected error has occurred. If the issue persists, contact your support provider.
Action	<p>Actions that can be executed depending on the appliance mode and status.</p> <ul style="list-style-type: none"> • For active primary appliance:

COLUMN	DESCRIPTION
	<ul style="list-style-type: none"> • Swap: Swap the roles of the primary appliances. Sets the current passive primary appliance to primary mode (active) and the current active primary appliance to primary mode (passive). Appears when the passive primary appliance has synced all settings from the active primary appliance. For details, see Swapping the Active Primary Appliance and the Passive Primary Appliance on page A-32 • For passive primary appliance: <ul style="list-style-type: none"> • Detach: Detach the passive primary appliance. Disables high availability and allows the passive primary appliance to be used as a standalone appliance. Appears when the passive primary appliance has synced all settings from the active primary appliance. For details, see Detaching the Passive Primary Appliance from the Cluster on page A-32 • Remove: Remove inaccessible passive primary appliance. Disables high availability. Appears when the active primary appliance is unable to reach the passive primary appliance through eth3. For details, see Removing the Passive Primary Appliance from the Cluster on page A-32 • For secondary appliances: <ul style="list-style-type: none"> • Remove: Remove inaccessible secondary appliance. Affects object processing capacity. Secondary appliances attempt to connect to the active primary appliance every 10 seconds. Appears when the active primary appliance does not receive a heartbeat from the secondary appliance within one minute. For details, see Removing a Secondary Appliance from the Cluster on page A-35

Click **Refresh** to refresh the information in the **Nodes** list.

Adding a Passive Primary Appliance to the Cluster

The following table lists requirements that need to be fulfilled by both active primary appliance and passive primary appliance before the passive primary appliance can be added to the cluster.

TABLE A-10. High Availability Clustering Requirements

REQUIREMENT	DESCRIPTION
Hardware model	Must be the same hardware model (1100 or 1200)
Physical connection	<p data-bbox="521 337 1189 402">Recommended to connect to each other directly using eth3</p> <hr/> <p data-bbox="528 415 585 475"> Important</p> <p data-bbox="602 448 1170 574">When using high availability, eth3 is used to connect the two identical appliances and cannot be used for other purposes (for example, as the management port, external network connection, or as a member port in a NIC team).</p> <hr/> <p data-bbox="528 638 585 688"> Note</p> <p data-bbox="602 670 1189 764">If the active primary appliance is not connected to the passive primary appliance directly (for example, if they are in different data centers), the following requirements must be met:</p> <ul data-bbox="628 786 1177 1073" style="list-style-type: none"> <li data-bbox="628 786 1163 846">• The appliances must be Deep Discovery Analyzer 1100, 1200, or 1300. <li data-bbox="628 867 1177 1073">• The connections between the appliances must meet the following conditions: <ul data-bbox="673 948 1063 1073" style="list-style-type: none"> <li data-bbox="673 948 1016 976">• Network latency is less than 15 ms <li data-bbox="673 997 1063 1024">• Packet loss ratio is less than 0.000001% <li data-bbox="673 1045 1110 1073">• Network bandwidth is greater than 240Mbps
Firmware, hotfix, and patch version	Must be the same
Host name	Must be different

REQUIREMENT	DESCRIPTION
IP addresses	<p>Must be symmetrical:</p> <ul style="list-style-type: none"> • If only IPv4 address is configured on active primary appliance, passive primary appliance cannot configure both IPv4 address and IPv6 address. • If IPv4 address and IPv6 address are configured on active primary appliance, passive primary appliance cannot only configure IPv4 address.
Network segment	Must be in the same network segment
Virtual IP address	Must be configured on the active primary appliance
Management port	Must use the same network port
External connection port for Virtual Analyzer	Must use the same network port
NIC teaming	If configured, must use the same NIC teaming ports and connection type

In a high availability cluster, one appliance acts as the active primary appliance, and one acts as the passive primary appliance. The passive primary appliance automatically takes over as the new active primary appliance if the active primary appliance encounters an error and is unable to recover.

Note

When using high availability, use the virtual IP address to register.

Procedure

1. Perform the installation and deployment tasks as described in [Installing the Appliance on page 3-1](#).
2. Configure the passive primary appliance.
 - a. On the management console of the passive primary appliance, go to **Administration > System Settings** and click the **Cluster** tab.

- b. Select **Primary mode (passive)**.
- c. Type the IPv4 address or IPv6 address of the active primary appliance in **Active primary IP address**.
- d. Click **Test Connection**.
- e. Click **Save**.

You will be redirected to the appliance standby screen.

-
- The passive primary appliance stops processing objects if it was previously doing so.
 - The passive primary appliance will sync all settings from the active primary appliance. The total time to complete syncing depends on the appliance model.

**Important**

While the appliance is syncing, it cannot:

- Take over as active primary appliance
 - Switch to another mode
-
- The management console of the passive primary appliance cannot be accessed. Manage the appliance and monitor the sync status from the management console of the active primary appliance.
 - After you deploy Deep Discovery Analyzer in a high availability cluster, you cannot change the settings for the following:
 - NIC teaming
 - Management port
 - External network connection

Swapping the Active Primary Appliance and the Passive Primary Appliance

Swapping the primary appliances sets the current passive primary appliance to primary mode (active) and the current active primary appliance to primary mode (passive).

Procedure

1. On the management console of the active primary appliance, go to **Administration > System Settings** and click the **Cluster** tab.
 2. Click **Swap** to swap the primary appliances.
-

Detaching the Passive Primary Appliance from the Cluster

Detaching the passive primary appliance disables high availability and allows the appliance to be used as a standalone appliance. After a passive primary appliance is detached, it no longer appears in the nodes list.

Detach the passive primary appliance to update or upgrade the product.

Important

Detaching the passive primary appliance does not reset the appliance settings. Trend Micro recommends reinstalling the appliance if you want to use it as a standalone appliance.

Procedure

1. On the management console of the active primary appliance, go to **Administration > System Settings** and click the **Cluster** tab.
 2. Click **Detach** to detach the passive primary appliance from the cluster.
-

Removing the Passive Primary Appliance from the Cluster

Removing a disconnected or abnormal passive primary appliance from the cluster reduces the clutter in the nodes list.

Procedure

1. On the management console of the active primary appliance, go to **Administration > System Settings** and click the **Cluster** tab.
2. Wait for **Remove** to appear next to the passive primary appliance in the nodes list.
3. Click **Remove** to remove the passive primary appliance from the cluster.

**Note**

The passive primary appliance automatically rejoins the cluster if it reconnects to the active primary appliance.

Adding a Secondary Appliance to the Cluster

Verify that the secondary appliance has the same firmware, hotfix, and patch version as the active primary appliance.

To view the appliance firmware, hotfix, and patch version, see the *Deep Discovery Analyzer Administrator's Guide*.

Update or upgrade the appliance firmware, hotfix, and patch version as necessary. For details, see the *Deep Discovery Analyzer Administrator's Guide*.

**Note**

- If your network has Trend Micro Apex Central, only register the active primary appliance to Apex Central.
 - When using high availability, use the virtual IP address to register.
-

Procedure

1. Perform the installation and deployment tasks as described in [Installing the Appliance on page 3-1](#).
2. Configure the secondary appliance.

- a. On the management console of the secondary appliance, go to **Administration > System Settings** and click the **Cluster** tab.
- b. Select **Secondary mode**.
- c. Type the IPv4 address or IPv6 address of the active primary appliance in **Active primary IP address**.

**Note**

If you are using high availability, type the IPv4 virtual address or IPv6 virtual address.

- d. Type the **Active primary API key**.
- e. Click **Test Connection**.

**Tip**

Secondary appliances can test their connection to the active primary appliance at any time. Click **Test Connection** to get detailed information about any connectivity problems.

- f. Click **Save**.
3. (Optional) Configure additional settings on the secondary appliance.
 - a. Configure the sandbox network connection setting.
For details, see [Enabling External Connections on page A-21](#).

**Note**

Trend Micro recommends using the external network connection setting of the active primary appliance.

- b. Configure the **Sandbox for macOS** setting.
For details, see the *Deep Discovery Analyzer Administrator's Guide*.
- c. Configure the appliance network settings.
For details, see [Network Tab on page A-12](#).

d. Add accounts.

For details, see [Accounts Tab on page A-3](#).

Note

Secondary appliances automatically deploy sandbox instances based on the sandbox allocation ratio of the active primary appliance. The following table lists a configuration example:

TABLE A-11. Example Configuration Using Two Images

APPLIANCE TYPE	DEEP DISCOVERY ANALYZER HARDWARE MODEL	MAXIMUM NUMBER OF INSTANCES (TOTAL)	NUMBER OF WINDOWS 7 INSTANCES	NUMBER OF WINDOWS 8.1 INSTANCES
Primary appliance	1200 or 1100	60	40	20
Secondary appliance	1200 or 1100	60	40	20

Removing a Secondary Appliance from the Cluster

Removing a disconnected secondary appliance from the cluster reduces the clutter in the nodes list and widgets of the active primary appliance.

Procedure

1. On the management console of the active primary appliance, go to **Administration > System Settings** and click the **Cluster** tab.
2. Wait for **Remove** to appear next to the secondary appliance in the nodes list.

Note

Secondary appliances attempt to connect to the active primary appliance every 10 seconds. If the active primary appliance does not receive a heartbeat within one minute, **Remove** appears next to the secondary appliance in the **Nodes** list.

Secondary appliances automatically rejoin the cluster if they reconnect to the active primary appliance.

3. Click **Remove** to remove the secondary appliance from the cluster.

The secondary appliance is removed from the nodes list and widgets of the active primary appliance.

Replacing the Active Primary Appliance with a Secondary Appliance

If the active primary appliance is unresponsive or cannot be restored, and no passive primary appliance is deployed, it can be replaced by a secondary appliance from the same cluster.

Tip

Trend Micro recommends deployment of a passive primary appliance for high availability. For details, see [Adding a Passive Primary Appliance to the Cluster on page A-28](#).

Important

Submissions do not have a result if they were being analyzed on the active primary appliance when it becomes unresponsive.

Procedure

1. Power off the active primary appliance.
2. Select a secondary appliance from the same cluster and configure it as the new active primary appliance.

- a. On the management console of the secondary appliance, go to **Administration > System Settings** and click the **Cluster** tab.
 - b. Select **Primary mode (active)**.
 - c. Click **Save**.
3. Configure the IP address of the new active primary appliance.
For details, see [Network Tab on page A-12](#).

**Note**

Trend Micro recommends using the same IP address as the original active primary appliance. This allows secondary appliances and integrated products to connect without reconfiguration.

4. Verify the settings on the new active primary appliance.

**Note**

Settings take up to one day to propagate to secondary appliances.

Resetting the Default `admin` Account

If you have forgotten the password for the default `admin` account, you can reset the account through a serial connection on the Deep Discovery Analyzer appliance.

Prepare the following:

- A computer with a serial port and terminal emulation program (for example, PuTTY)
- A serial cable

Procedure

1. On the front of your Deep Discovery Analyzer appliance, pull out the information tag and copy the last 5 alphanumeric characters of the service tag.

2. Verify that the Deep Discovery Analyzer appliance is powered on.
3. Connect the serial port on your computer to the serial port on the rear panel of the Deep Discovery Analyzer appliance.
4. On your computer, identify the communication port number (for example, COM1) for the serial connection.
5. Open the terminal emulation program and start a serial communication session using the connection settings listed in the following table.

PARAMETER	SETTING
Connection type	Serial
Port	The communication port number on your computer (for example, COM1)
Baud rate	115200
Data bits	8
Stop bits	1
Parity	None
Flow control	XON/XOFF

A terminal screen appears with the cursor.

6. Press ENTER.

The logon screen appears.

**Note**

For information on using the preconfiguration console, see [Preconfiguration Console Basic Operations on page 4-4](#).

7. If you are already logged into the preconfiguration console, select **Log Off** and press ENTER.
8. Type valid logon credentials. The default credentials are:

- User name: `admin`
- Password: The last 5 alphanumeric characters of the service tag

The **Reset Admin Account** screen appears.

9. Type the new password twice.
10. Select **Save** and press ENTER.
11. After the password is reset successfully, select **OK** and press ENTER to return to the logon screen.

**Note**

The system also performs the following actions on the `admin` account:

- Reset the account to the administrator role
 - Unlocks the account if it is locked
-
