

Security Management System (SMS) Release Notes

Version 6.6.1.1

This release includes all issues fixed in the *Security Management System Release Notes Version 6.6.1*. For details about those changes, refer to the respective Release Notes on the [Online Help Center](#).

Important notes for SMS

- All v6.6.1 customers can optionally apply this patch so that the issues it addresses are corrected. However, upgrades to a later TOS do not require an installation of this patch first.
- Patch installation should take approximately 15 minutes.
- To prevent your account from being disabled while you wait for authentication resources to become available after the reboot, navigate to **Edit > Preferences** and make sure that you deselect **Lock user after failed login attempts** and **Auto reconnect client to server after a disconnect occurs**. The SMS automatically reboots after you install this release. You will then be prompted to update the SMS client.
- This patch can be uninstalled or rolled back to the previous version.

Release contents

The following enhancements or repairs are included in this release.

Description	Reference
An issue where SMS profiles and filter override data no longer appeared in TrendAI Vision One™ after upgrading to SMS 6.6 has been fixed.	PCT-95451
An issue where SMS database backups could not be saved to an SMB share with SMBv3 encryption enabled has been fixed.	PCT-70187
An issue where custom segment names did not consistently appear in the segment selection window when distributing a profile has been fixed.	PCT-85104 TIP-237516
An issue where client software installers could not be downloaded from the SMS server has been fixed.	TIP-252498
An issue where the SMS database cleanup process remained in a pending state and did not complete without manual intervention has been fixed.	PCT-78669
An issue where Digital Vaccine Toolkit filter names were corrupted after importing multiple packages, causing filters to not appear in search results, has been fixed.	PCT-80829
An issue where the SMS database storage file grew excessively large, filling the database partition and causing SMS operational errors, has been fixed.	TIP-238565
An issue where TrendAI Vision One™ could not display event logs because of corrupted values in the ALERT table has been fixed.	PCT-83064
