Trend Micro™ TippingPoint™
Security Management System (SMS)
Release Notes

Version 6.4.0.1

This release includes all issues fixed in the *Security Management System Release Notes Version 6.4.0.* For details about those changes, refer to the respective Release Notes on the [Online Help Center](#).

Important notes for SMS

- All v6.4.0 customers can optionally apply this patch so that the issues it addresses are corrected. However, upgrades to a later TOS do not require an installation of this patch first.

- Patch installation should take approximately 15 minutes.

- To prevent your account from being disabled while you wait for authentication resources to become available after the reboot, navigate to **Edit > Preferences** and make sure that you deselect **Lock user after failed login attempts** and **Auto reconnect client to server after a disconnect occurs**. The SMS automatically reboots after you install this release.

- This patch can be uninstalled or rolled back to the previous version.

Release contents

The following enhancements or repairs are included in this release.

Description	Reference
After an upgrade to v6.4.0, Dell H4 platforms no longer show an amber LED and return the following hardware system error in iDRAC: `A fatal error was detected on a component at bus 2 device 0 function`	TIP-134131 PCT-53957
A FIPS-restored SMS no longer generates an authentication error after the TLS version is modified.	TIP-134129
This release fixes an issue that caused Trend Vision One™ to return a code of `HTTP 206 (Partial Content)` when sending too many Suspicious Object Journals to the SMS in a single response.	TIP-133988
An issue that caused an HA configuration to fail after an upgrade from 6.3.0 to 6.4.0 has been fixed.	TIP-133973
The reputation setting `To HTTP requests with matching domain names` now defaults to `false` for file distributions.	TIP-133942
Profile distributions no longer duplicate the Named IP Address Group.	TIP-133939 PCT-2029
