

Trend Micro™ TippingPoint™ Security Management System (SMS) Release Notes

Version 6.4.0.1

This release includes all issues fixed in the *Security Management System Release Notes Version 6.4.0*. For details about those changes, refer to the respective Release Notes on the [Online Help Center](#).

Important notes for SMS

- All v6.4.0 customers can optionally apply this patch so that the issues it addresses are corrected. However, upgrades to a later TOS do not require an installation of this patch first.
- If your SMS server is configured for High Availability (HA), you must disable HA prior to installing this patch.
- Patch installation should take approximately 15 minutes.
- To prevent your account from being disabled while you wait for authentication resources to become available after the reboot, navigate to **Edit > Preferences** and make sure that you deselect **Lock user after failed login attempts** and **Auto reconnect client to server after a disconnect occurs**. The SMS automatically reboots after you install this release.
- The SMS v6.4.0 release provided a number of enhancements to Domain Reputation. One change made Domain Reputation apply to HTTP GET requests by default. Under rare conditions, this could cause scaling issues on devices running any TOS earlier than v6.4.0. To mitigate this issue, SMS now disables matching Domain Reputation against HTTP traffic by default. To restore this capability, upgrade your device to TOS v6.4.1 or later.
- This patch can be uninstalled or rolled back to the previous version.

Release contents

The following enhancements or repairs are included in this release.

Description	Reference
Dell H4 platforms no longer show an amber LED and return the following hardware system error in iDRAC: <code>A fatal error was detected on a component at bus 2 device 0 function</code>	TIP-134131 PCT-53957
